Elvya Ané

Ottawa, ON | 819-355-5047 | elvya.ane@gmail.com | github.com/ElvyaAne

Education

University of Ottawa — Ottawa, ON
Joint Honours BSc in Computer Science and Mathematics, Co-op — *Sep. 2025 – May 2029 (expected)*

- **CGPA:** 8.82/10 | **Dean's Honour List** (Fall 2025)

Technical Experience

Tenshi | stillaliveby.design | *Node.js, Express, TimescaleDB, Whisper, Llama 3.1, Vultr, Arduino* — Oct. 2026

- **Won 2nd place (Project KAZE challenge, Hack the Valley 11)** with a "dead man's switch" for nights out that gets help to someone who stops responding, with no button press needed
- Reaches trusted contacts with a live location and AI-written summary even if the user's phone dies, via a server-side 5-stage escalation (nudge, alarm, PIN stand-down, trusted contact, wider circle)
- Kept 100% of user audio off third-party AI by self-hosting Whisper, Vosk and the Llama 3.1 LLM on Vultr for in-memory distress detection; risk engine forecasts battery death and slow replies to adapt check-ins

Classmark | classmark.vercel.app | *React, TypeScript, Supabase, PostgreSQL, Vercel* — Oct. 2026 – Present

- Launched a web app that gives verified students a percentile ranking against peers on GPA, projects and internships
- Guaranteed no student can be singled out, using PostgreSQL row-level security, 5-person minimum groups, and guards against de-anonymizing by combining filters
- Limited access to verified students via school-email one-time codes; backed by 84 automated tests (unit, database, Playwright end-to-end)

Stardust | *JavaScript, Chrome Extensions (Manifest V3), Claude API* — Oct. 2026 – Present

- Lets anyone restyle any website with no code, from a plain-English prompt ("cozy coffee shop", "hide YouTube Shorts"), by streaming LLM-generated CSS onto the live page
- Shrinks each page's DOM to a compact outline (visible elements, classes, colours, CSS variables) so the model gets only what it needs; chat refinement with undo/redo and styles saved per site

Viralense | *Node.js, Express, TimescaleDB, PostGIS, WebSockets, Leaflet* — Sep. 2026 – Present

- Developing a web app that warns residents which city zones carry sickness risk, built from symptom reports and in-browser cough detection
- Designed a 0–100 risk index over a 500 m zone grid, streamed to a live heatmap over WebSockets; privacy-first schema (salted IDs, 100 m location rounding, 14-day retention)

Awards

2nd Place, Project KAZE Challenge – Hack the Valley 11 (UTSC) — Oct. 2026
Project: Tenshi (above) — *Toronto, ON*

Hackathon Participant – Hack the Hill III — Sep. 2026
Team project: Clash of Slops, a live multiplayer AI image-prompt battle game — *Ottawa, ON*

Prix Jeunesse en TI, Réseau ACTION TI – Hydro-Québec Expo-Sciences — Mar. 2025
Research project on volumetric displays, presented to a panel of 10 judges — *Gatineau, QC*

Technical Skills

Languages: Python, Java, C++, JavaScript, TypeScript, SQL, Verilog, HTML/CSS
Frameworks & Data: Node.js, Express, REST APIs, React, PostgreSQL, Supabase, WebSockets
AI & Cloud: Claude API, Whisper, Llama, Vultr, Vercel, Docker
Tools: Git, GitHub Actions, Playwright, Linux, FPGA
Spoken: English and French (fully bilingual), Spanish (basic)
